	Every other day	15 wands	\$1.79/wand	\$26.85/month

### Ideal Wand Combination for NFP Users

For NFP users confirming ovulation through PdG levels, Mira recommends either using **MAX wands only** or a **combination of PLUS and MAX wands** for a cost-effective and reliable approach.

- **Option 1:** Use MAX wands exclusively.
- **Option 2:** Use PLUS wands during the follicular phase until the LH surge, then switch to MAX wands for 3–5 days to confirm ovulation. Continue with MAX if PdG results remain inconclusive.

**Note:** Avoid switching wand types or lots within the same cycle to maintain consistency in E3G measurements. Switching after ovulation is acceptable.
